FATHY ABDELSHAHID

• Melbourne, Victoria, Australia

SUMMARY

Full-Stack Software Consultant with engineering experience across Golang, Python, JavaScript/React, LLM integration, and distributed backend infrastructure. Proven track record spanning AI tooling and API integration, high-reliability payment backend services, modern frontend architecture, and technical discovery for large-scale enterprise clients including NBN Australia. Experienced in delivering secure, maintainable software and CI/CD automation across complex client environments.

TECHNICAL SKILLS

- Languages & Core: Python, Go (Golang), JavaScript/TypeScript, SQL, HTML5/CSS3
- Backend & APIs: RESTful APIs, Microservices Architecture, gRPC, Node.js, API Security & Validation
- Frontend: React, Redux, Modern JavaScript/TypeScript, Responsive UI/UX
- Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis
- DevOps, CI/CD & Cloud: Git, GitHub Actions, GitLab CI/CD, Docker, Linux Fundamentals, Shell Scripting, Cloud Platforms (AWS/GCP)
- Security & Practices: DevSecOps Hygiene, OWASP Best Practices, Automated Discovery, Test-Driven Development (TDD), Code Reviews

EXPERIENCE

Capgemini, ***Software Consultant***

March, 2026 - Present

- **EClient Engagement:** NBN Australia
- **Spearhead technical discovery**, architectural mapping, and CI/CD workflow automation across platform delivery pipelines.
- **Architect and design automation frameworks integrating AI-assisted** tooling to accelerate engineering delivery and eliminate manual pipeline handoffs.
- **Collaborate directly with client enterprise stakeholder**s to translate complex technical constraints into clear, secure, and maintainable implementation roadmaps.
- **Establish version-controlled technical documentation** and system discovery matrices, standardizing multi-team development processes.

Optizmo, ***Mid Level FullStack Software Developer***

Jan, 2026 - March 2026

- **Led Features** on frontend application development using React and modern JavaScript/TypeScript, building intuitive, high-performance user interfaces.
- **Architected complex client-side** state management and optimized data rendering for data-heavy dashboards and reporting views.
- Integrated responsive frontend components with backend REST APIs, improving client-side caching and reducing network latency.
- Maintained high frontend quality standards through thorough **pull request reviews, component testing, and CI/CD integration.**

Zai Payments, ***Graduate Software Engineer (1Yr program)***

Nov, 2024 - Dec, 2025

- Focused on core backend payment infrastructure, API development, and high-reliability financial transaction services.
- Refactored and optimized legacy API endpoints, substantially improving response latencies and database throughput across SQL databases.
- **Implemented defense-in-depth API security standards**, strict **schema validation**, input sanitization, and structured logging.
- **Built and maintained automated CI/CD pipelines** to ensure safe, test-backed deployments across staging and production environments.

Episoft, ***Student AI Engineer (Project-Based)***

Feb, 2025 - Dec, 2025

- **Built and integrated backend API**s enabling software applications to communicate reliably with Large Language Models (LLMs).
- **Designed robust API schema**s, middleware, and request/response pipelines to manage token limits, context formatting, and model outputs.
- Implemented **caching and asynchronous job queues** to handle latency and manage high-volume LLM API requests efficiently.
- **Partnered across product and technical teams** to prototype and deliver production-ready AI-driven features.

EDUCATION

Monash University

Bachelor of Engineering (Hons) •***Software Engineering***

HONORS & Leadership

Senior school captain

Head Coach(AvondaleFC): Led youth training programs, resulting in a League Championship through dedicated leadership and mentoring.
